

# BIOCHAR ACTIVE

*planting in gardens*

## STEP 1

Typically there will be between 5 and 10 garden trowels of soil removed to place the plant into. Prepare the soil with one heaped trowel (250ml) of Biochar Active to 5 trowels of soil. If the hole is bigger i.e. 10 trowels of soil use two heaped trowels of Biochar Active and so forth for larger holes for scrubs and trees

The amount of Biochar Active can be increased for heavy clay soils to 2 heaped trowels (500ml).

## STEP 2

Mix Biochar Active and soil in hole. To add an extra boost mix in 1-2 trowels of compost

## STEP 3

Water in well
